## Vertex frame width in R network plot

My question follows the one [here](#), about how to change the vertex frame width in igraph.

With updates in igraph, the proposed solution seems not to work anymore. Does anybody have a solution (or maybe knows another package that provides networks with changeable vertex frame width?)

Thanks!

r networking igraph

### 1 Answer

You can define a new vertex shape that has a frame width parameter. It is not very hard, see an example here: <http://lists.gnu.org/archive/html/igraph-help/2013-03/msg00030.html>
